

Basic Division Worksheets Level 2

Introductory [Division worksheets](#) for kids

To complete this division worksheet, division problem is given. Draw the objects of your choice and find the quotient for each problem. *First one is done as an example.*

1) Find $21 \div 3$

To find the quotient, I will draw 21 small circles as

shown at right. Then I will  make groups of 3 circles.

When all the 21 circles got in the groups, then I count all the groups to get my *quotient* as the answer which is 7 in this case. Hence $21 \div 3 = 7$

2) Find $15 \div 3$

3) Find $16 \div 4$

4) Find $18 \div 3$

5) Find $24 \div 3$

6) Find $20 \div 4$

7) Find $24 \div 4$

8) Find $27 \div 3$

9) Find $30 \div 3$

10) Find $28 \div 4$
